

# Analysis of Educational Attainment by Ethnic Group

## Black and Hispanic

In the United States, We see a disproportionate number of Hispanics, on average, not getting any diploma relating to academics, with nearly 26% of their population. They are also more likely to stop at the high school level, with almost 29% not pursuing post-secondary education. The Hispanic population is severely underrepresented at the university level, around 17% less than the national average. The Black population is also underrepresented in universities, with 10 percent less of them getting a bachelor's or higher; however, they are more likely than average to attend college without completion, which could suggest a recent uptick in Black students attending university. They are also more likely to stop at the high school level, with almost 31%.
